

POLYMER & COLOURS INC.

D&L Polymer & Colours (DLPC) established in March 2006 is the newest member of D&L Group of Companies. An export processing locator in Laguna, it provides the plastics industry with custom designed and formulated dry colourants, colour masterbatches and additives and engineered polymers for a wide range of applications.

DLPC shares the same colouring and compounding technology as its sister company, First in Colours, Incorporated. It has 3 business units i.e. Polymer Colour Compounding, Plastic Compounds, Plastic Colours and Additives.

DLPC's manufacturing facilities are designed for multi-products and order size flexibility.

## COLOUR COMPOUNDING

- DLPC is engaged in colour compounding of various resins such as ABS, PS, PC, PC/ABS, etc.. With its tight colour control, clients are ensured with consistent colours from the very first day the colour was approved.
- DLPC compounding expertise is strengthened further through its technical technical tie-up with Nippon Pigment (S).
- DLPC is equipped with flexible production lines, catering for small to big orders.

POLYMER & COLOURS INC.

## PLASTIC COMPOUNDS

In the manufacture of engineered polymers, the group utilizes a wide range of locally and internationally available resins and compounds, additives, fillers and colourants and various compounding technologies and expertise, developed over the years to come out with custom designed and formulated polymers that customers need for extruding, forming or molding their products.

## PLASTIC COLOURS & ADDITIVES

The group's brand has been trusted by customers for over 30 years for all their colour concentrate needs for films and tapes, to mouldings, wire and cable, high end fibers, etc. This is how we started, its what we do best.

With experience in the plastics compound and colour industries, the group developed a unique set of fully dispersed and highly concentrated pigment preparations patterned after the "tinting system" used successfully in the paint and coating industries. It's range of pigment preparations compete against equivalent products from global giants.

The group also developed a proprietary mixture of additives which when added to conventional plastics such as polyethylene and polypropylene, makes such plastics biodegradable.

## Key Accounts Served Directly or Indirectly

- Johnson & Johnson
- URC
- Unilever
- Sharp
- Panasonic
- Nestle
- Asia Brewery
- San Miguel Yamamura
- Orocan
- NutriAsia
- Yazaki
- Honda
- Kawasaki
- Hanabishi
- Colgate Palmolive
- Jollibee
- ShoeMart
- Robinson's
- Mercury Drug
- Chevron
- Petron
- Rustan's
- Waltermart
- Sumitomo Wire and Cable (IEW / IWS)

## Worldwide Markets
